Utility methods for dealing with HTML.

---

**Build Status**

---

## **Installation**

---

```
pip install watson-html
```

### Testing

---

Watson can be tested with py.test. Simply activate your virtualenv and run `python setup.py test`.

---

## **Contributing**

---

If you would like to contribute to Watson, please feel free to issue a pull request via Github with the associated tests for your code. Your name will be added to the AUTHORS file under contributors.

---

## Table of Contents

---

## 5.1 Reference Library

### 5.1.1 watson.html.elements

```
class watson.html.elements.TagMixin(**kwargs)
```

Simple tag mixin used for all html tags.

All keyword arguments that get passed to `__init__` will be converted into attributes for the element.

#### attributes

*dict*

a dictionary of attributes associated with the tag.

#### \_\_init\_\_(\*\*kwargs)

```
watson.html.elements.flatten_attributes(attrs, keep_empty=False)
```

Flattens attributes into a single string of key=value pairs.

Attributes are sorted alphabetically.

### 5.1.2 watson.html.entities

```
watson.html.entities.decode(string)
```

Decodes html entities.

**Returns** string with html entities decoded.

```
watson.html.entities.encode(string)
```

Encodes html entities.

This is a little more full featured than `html.escape`, as it will replace all characters from `codepoint2name`.

**Returns** string with replaced html entities.

**W**

`watson.html.elements`, 11  
`watson.html.entities`, 11

## Symbols

`__init__()` (watson.html.elements.TagMixin method), [11](#)

## A

`attributes` (watson.html.elements.TagMixin attribute), [11](#)

## D

`decode()` (in module watson.html.entities), [11](#)

## E

`encode()` (in module watson.html.entities), [11](#)

## F

`flatten_attributes()` (in module watson.html.elements), [11](#)

## T

`TagMixin` (class in watson.html.elements), [11](#)

## W

watson.html.elements (module), [11](#)

watson.html.entities (module), [11](#)
